Hi Jason, Wes, & Sean,

Here is the Division's signed letter with finalized comments on the first review of the Green Solutions NOI. These finalized comments are numbered for ease in responding. There are roughly 10 additional comments and some modifications to the originally-emailed draft comments that I sent earlier in the week. Please respond to the comments included with this signed letter, and not the previously-emailed, draft version.

You will see that there are a lot of comments to address. Most should be fairly straightforward and simple. There are some that may take more effort. There are a number of map comments. There is also a comment asking for the storm water runoff calculations that were used for sizing the sediment pond and culverts. Also a comment about dust and silica. As of when I sent the draft comments, the hydrology hadn't been thoroughly reviewed, or we would have pointed that out earlier.

If you want to send in a few responses to this review, we are willing to review them in steps, rather than all at once, as it may save time. But the number of submittals responding to this letter should be minimized. Jason will need to sign the MR-REV form that accompanies your submittals (). Electronic submittals are welcome to get us started. Hardcopies should be submitted as well.

Feel free to call me regarding any of the comments or the review process. There may be some cases where it would be better to talk about a comment with the other reviewers for their explanation. The other reviewers' numbers are in the letter, or I can pass questions on to them.

Thanks for the patience.

Peter
